

TVET in the Water Sector

Course 1: TVET in the water sector – Overview of qualifications and competencies Lessons learnt from Germany

Each sector of the economy has specific requirements for its professionals and their respective education and training. In the broad water sector, the focus is on the operation, maintenance and construction of complex technology and infrastructure, but also on spatial planning, administration and customer service. This course explains the high relevance of TVET for the water sector worldwide. It covers the framework conditions, the diversity of existing job profiles, requirements and latest development for Technical and Vocational Education and Training in a sustainable water sector.

- **Content, elements, format and duration can be customised to the respective needs**
